

Narrow Plates

This range of narrow door furniture has been designed primarily for use on glazed, aluminium and wood frame doors where there is space for narrow back set mortice locks only. The design can be used with a variety of internationally available locks of minimum 30mm back set, or greater. All handles have a return spring within the plate for positive handle return.

The inside plates feature a unique semi concealed fixing. They are fastened by socket set screws on the top and bottom edge of the plate to two mounting collars and screws that hold the outside plate to the door.

The plates are able to combine the escutcheon function with the handle on external doors, and latching and privacy applications on internal doors where the style of the narrow plate is required.

The following handles are suitable for 30mm back set applications:

Nile PM24 and PM25 Comma PM34 Rib PM44

Back Plate Dimensions: 32mm wide x 12.5mm high.

Plate lengths are detailed in the following drawings.

Finishes: Refer to page 17

Example and specification of an order for Narrow Plates and Lever Handles.
